

Autism Spectrum Rating Scales Short Form (6-18 Years)

Sam Goldstein, Ph.D. & Jack A. Naglieri, Ph.D.

Progress Monitoring Report

Youth's Name/ID: Joey D

Gender: Male

Birth Date: January 02, 1999

	Administration 1	Administration 2
Youth's Name/ID:	Joey D	Joey D
Administration Date:	Jul 29, 2009	Aug 19, 2009
Age:	10 years	10 years
Grade:	5	5
Rater Type:	Parent	Parent
Rater's Name/ID:	Mr. D	
Assessor's Name:	Dr. G	Dr. G
Data Entered By:	Maria	Maria

This Progress Monitoring Report is intended for use by qualified assessors only.

Overview

The Autism Spectrum Rating Scales Short Form (6-18 Years) [ASRS Short Form (6-18 Years)] is a 15-item scale designed to differentiate youth with Autism Spectrum Disorder from those in the general population, and those with other clinical disorders. High scores suggest that many behaviors associated with Autism Spectrum Disorder have been observed. This computerized report combines the results of up to four ASRS Short Form (6-18 Years) administrations to help the user interpret important changes in reported behavior that have occurred over time. Please note that this Progress Monitoring Report is intended to provide an overview of how scores have changed over time. For detailed information about any given administration, please refer to the ASRS Short Form Interpretive Reports. This computerized report provides quantitative information about the ratings of the youth. Additional interpretive information can be found in the *ASRS Technical Manual*. This Progress Monitoring Report is intended for use by qualified assessors only.

T-scores: Comparisons Across Administrations

Detailed Scores: Comparisons Across Administrations

The following table displays T-scores, Confidence Intervals, Percentile Ranks, and Classifications, as well as any statistically significant ($p = .10$, adjusted for multiple comparisons) changes in T-scores. If a “Significant Increase” was found, this indicates that the symptoms have become more pronounced (i.e., the youth’s problems have become more of a concern) across administrations. If a “Significant Decrease” was found, this indicates that the symptoms have become less pronounced (i.e., the youth has improved) across administrations. A designation of “No Significant Change” indicates that the amount of change across administrations did not reach statistical significance.

	Admin 1	Admin 2	Significant Changes Across Administrations
			Admin 1 to Admin 2
T-score	70	68	No Significant Change
90% Confidence Interval	64-73	62-71	
Percentile	98	96	
Classification	Very Elevated	Elevated	
Further evaluation appropriate?	✓	✓	

Summary of Significant Changes

Ratings on the ASRS Short Form (6-18 Years) indicate the extent to which the youth's behavioral characteristics are similar to the behaviors of youth diagnosed with Autism Spectrum Disorder. Elevated scores were obtained for Admin 1 (T = 70; 90% CI = 64-73), and Admin 2 (T = 68; 90% CI = 62-71). Scores were not significantly different across administrations.

Note: Elevated score = T-score \geq 60; Low/Average score = T-score $<$ 60; T = T-score, CI = Confidence Interval.

Item Responses

The rater marked the following responses for items on the ASRS Short Form (6-18 Years).

Item	Ratings	
	Admin 1	Admin 2
1.	1	0
2.	2	1
3.	3	2
4.	2	4
5.	2	1
6.	1	1
7.	1	1
8.	1	1
9.	1	1
10.	1	1
11.	1	2
12.	2	2
13.	2	2
14.	1	4
15.	1	2

Response Key:

- 0 = Never
- 1 = Rarely
- 2 = Occasionally
- 3 = Frequently
- 4 = Very Frequently
- ? = Omitted Item
